

COMBINED SHUFFLE BOARD AND POOL GAME ASSEMBLY

ABSTRACT

A combined shuffleboard and pool game assembly includes a playing surface that has a substantially rectangular shape and a plurality of elongated rails removably engageable with the playing surface. The plurality of rails include opposed arcuate end portions for defining a plurality of pockets when engaged with each other. A plurality of elongated bumpers are spaced from each other and are attached to the plurality of rails that extend along the length and width of the playing surface. The plurality of elongated bumpers have opposed end portions disposed adjacent the plurality of arcuate end portions respectively. An accessory kit is provided for allowing players to participate in any one of a number of various games of their choice.
